

Global Enterprise Methodology

This is our global approach that enables your organisation to understand its current exposure and make informed decisions for continuous risk management.

The threat landscape is continually changing and so too are the associated risks within your business. In order to deliver a successful long-term strategy, these risks must be managed in the context of your organisation's commercial objectives, so that informed decisions can be made.

Risk and security touches your whole organisation. At NTT Com Security, we appreciate that both commercial and technical engagement is necessary to allow an agreed and consistent approach. We drive alignment - from strategy to operations - throughout your organisation, to highlight the areas of focus required for continuous risk management.

We apply our unique WideAngle Global Enterprise Methodology to identify, prioritise and deliver risk and security management. We map your enterprise security architecture to your governance, risk and compliance approach, using enabling technologies to drive security operations. To support your organisational goals, we ensure that a relevant, value-driven approach is applied. We agree a set of controls against which your risk management capabilities are measured. Prioritised solutions are then delivered to enable continuous risk management.

The WideAngle Global Enterprise Methodology provides risk and security visibility and alignment across the whole organisation

Our unique WideAngle Global Enterprise Methodology at a glance:

- > Understand your information security needs across the organisation and identify your current risk exposure
- > Define the relevant controls and identify the prioritised activities to meet best practice
- > Align solutions to security architecture matched to your commercial goals
- > Implement a programme of delivery measured against the agreed controls, managing change within the organisation
- > Deliver the agreed security operations model for continuous risk management

Benefits of the WideAngle Global Enterprise Methodology:

Visibility

- > Enable informed investment decisions to be made across the global organisation

Efficiency

- > Optimise the use of your available resources

Agility

- > Balance your risk management with your commercial goals

Skills

- > Enable your employees to work in a way that embraces new technologies

Compliance

- > Meet your standards and regulatory needs

The WideAngle Global Enterprise Methodology is a five phase approach that enables your organisation to understand the current risk exposure and make informed decisions for continuous risk management.

Using our unique WideAngle Global Enterprise Methodology, we work with your organisation to deliver a relevant risk and security profile using a range of professional and managed services along with the

appropriate technology. We work with you at all stages of the process, providing visibility throughout the organisation and continuous risk management to meet your long-term organisational goals.

We see a more secure world

NTT Com Security is in the business of information security and risk management. By choosing our WideAngle consulting, managed security and technology services, our customers are free to focus on business opportunities while we focus on managing risk.

The breadth of our Governance, Risk and Compliance (GRC) engagements, innovative managed security services and pragmatic technology implementations, means we can share a unique perspective with our customers - helping them to prioritise projects and drive standards. We want to give the right objective advice every time.

Our global approach is designed to drive out cost and complexity - recognising the growing value of information security and risk management as a differentiator in high-performing businesses. Innovative and independent, NTT Com Security (formerly Integralis), has offices spanning the Americas, Europe, and APAC (Asia Pacific) and is part of the NTT Communications Group, owned by NTT (Nippon Telegraph and Telephone Corporation), one of the largest telecommunications companies in the world.
